Ivanka Trump
The White House
1600 Pennsylvania Avenue NW
Washington, DC 20500

Dear Ms. Trump:

I need your help, please.

On an unusually cold and snowy day, April 19, 2018 in Rochester, Minnesota the Mayo Clinic handed my wife Angie a death sentence of Amyotrophic Lateral Sclerosis (ALS). We were given no hope of recovery only a list of services to contact and the parting words "good luck." At that moment all happiness was ripped from our lives.

On June 3, 2019 Judge Ursula Ungaro of United States District Court for the Southern District of Florida sided with the FDA in an ongoing case against U.S. Stem Cell Clinic of Sunrise, Florida. At that moment she took away access to the stem cells of hundreds if not thousands of patients. And my wife. The Judge also took away our hope in our fight against this horrific disease.

I have never written to an official of any kind but now I am fighting for my wife's life – literally every day. She is a petite 5' tall, woman but a tremendous fighter. She has been battling her disease for likely more than two years. Average life expectancy of an ALS patient is 3-5 years. They will die from pneumonia, choking, respiratory failure or often a less taxing and personal method of their own choosing. I am humbled by her spirit and live each day by a code that "Love Always Hopes."

We immediately sought ALS clinical trials based on the benefits of stem cell treatments. It is paramount to know that Israel is on Phase 4 of its trial, Mayo is at Phase 3 and Phase 2 for SVC. Universities and Clinics across the country from Harvard Medical to Cedars Mount Sinai are seeing the benefits of stem cell treatments. So, after weeks of calls and investigation last July we went to the U.S. Stem Cell Clinic.

The day after her first injection her speech was back to 90% of it's original clarity – we were ecstatic! As the clinic told us continued results could possibly come from long-term and repeat treatments with no guarantees. After treatments every two months Angie is showing signs of remission. You can hear it in her voice and see her strength and atrophy being maintained. Something as simple as the return of her level smile brings me joy and determination.

Angie is one case. I don't have lobbyists or "Big Pharma" on our side. I only have my words and my wife. With the aid of U.S. Stem Cell her body is healing itself. I implore you to consider the personal facets of this case and the others who are getting results and intercede on behalf of them all to allow the continued stem cell treatment they so desperately need.

Thank you.

Sincerely,

Steven J. Martin
Loving Husband

RE: USA v US Stem Cell Clinic and others, Case 18-cv-61047-UU

Dear Judge Ungaro,

I am one of the over 6,000 patients of US Stem Cell clinic that has been positively impacted by SVF cell therapy to my knees. I had my 1st procedure done in March and was planning to have another treatment done in September. I had great success in my knee cartilage regeneration and planned to continue to use my banked cells (which I paid thousands of dollars to have extracted and legally stored) to maintain and improve my joint mobility. This therapy has allowed me to get back to running and doing athletic workouts that I enjoy. Being able to exercise also keeps me healthy, so that I am not a burden to society & our entire health care system - which is stressed by a population dealing with obesity, diabetes, cancer & opioid addictions (the drugs that are sadly approved by the FDA and cause thousands of "accidental deaths" everyday).

How shocking it was to find out that you have ordered to have MY CELLS - that HEAL MY BODY - to be destroyed?! This ruling defies logic. Can this injunction even be real? My initial thought, was that Judge Ungaro must not be totally aware of how much this therapy has helped thousands of people - SO many who have worse health issues than my own orthopedic case. She must not be aware of how simple, safe & effective the procedure is. My procedure was pain free and I experienced immediate relief and improved mobility. Why would we not make this an option for everyone in this country? This is a humanitarian issue! People have been helped by a natural procedure that is using their own cells to cure disease, regenerate joints and cartilage & heal their bodies, improve their quality of life - the way our Creator intended. Invasive surgery - which has been the alternative for many issues, has far more risks & pain; longer recovery times and still - the body will not be the same after surgery and anesthesia.

I am so grateful to Kristin Comella, her research and to US Stem Cell for giving me the opportunity to choose to use my adipose stem cells to heal and regenerate both of my knees. It allowed me to cancel the two total knee replacements that I had scheduled here in Minnesota, a year and a half ago. In Minnesota, the less effective and much more painful bone marrow cell therapy, was approved only a short time ago, with no option for adipose cell therapy -so I am thankful that I was able to fly to Weston, Florida to have the SVF therapy done.

I urge you to watch the Healthcare Revolution Documentary Series- healthcarerev.org and see for yourself, all of the miraculous cases that are being helped by SVF therapy and also the huge number of respected physicians -leaders in medicine- that are trying to do the right thing in administering this procedure to those in need.

To reiterate, I am dumbfounded to understand how the court can classify MY OWN tissue as a drug and how it can order to have my cells (and the other 6,000 people who have their cells banked) destroyed? It is our personal property, OUR BODY, OUR CELLS - OUR CHOICE. I appeal to you, Judge Ungaro, to think about the health of millions of Americans - including many children, elderly, people with chronic and life threatening disease, and quite likely, your own loved ones - to overturn your decision in this case and ultimately, support SVF therapy for the health and well being of our nation as a whole.

Sincerely,

Kristin N. Veker

ANGELA E. NOBLE CLERK U.S. DIST. CT. S. D. OF FLA. - MIAMI

RE: USA v US Stem Cell Clinic and others, Case 18-cv-61047-UU

The stem cells that U.S. District Judge Ursula Ungaro of the Southern District of Florida has decided to destroy in July ARE MY STEM CELLS, NOT A DRUG! They are not her stem cells - THEY ARE MY STEM CELLS!!!

I am a patient of the U.S. Stem Cell, Inc. in Florida. MY STEM CELLS are helping my knee issues. Without this treatment I live with extreme pain and need to aid of a brace. I paid for this procedure out of pocket, not via insurance so why is this even a conversation? Why are they being destroyed??!! Destroying someone's personal property is against the law, isn't it??

If stem cell therapy did not work, then the FDA and Big Pharma would not be inserting themselves into the equation. It works!! But THEY ARE MY CELLS, MY PROPERTY, A PART OF ME!

Please do not take this therapy treatment away from the American patients. Other countries do stem cell treatments daily and have done so for years now. Why is it that the US is more like a third world country when it comes to medicine? Why doesn't the U.S. Stem Cell Clinic have the right to fight this ruling? Why destroy MY stem cells? Why not give U.S. Stem Cell Clinic a chance to argue this in court. Why the rush to destroy MY STEM CELLS?

Sincerely

Valerie Panayoti Raymonds

Clerk of the Court
Harvey Ruvin
73 W. Flagler Street
Miami, FL 33128

RE: USA v U.S. Stem Cell Clinic and others, Case 18-cv-61047-UU

Mr. Ruvin

I need your help, please.

On an unusually cold and snowy day, April 19, 2018 in Rochester, Minnesota the Mayo Clinic handed my wife Angie a death sentence of Amyotropic Lateral Sclerosis (ALS). We were given no hope of recovery only a list of services to contact and the parting words "good luck." At that moment all happiness was ripped from our lives.

On June 3, 2019, Judge Ursula Ungaro of United States District Court for the Southern District of Florida sided with the FDA in an ongoing case against U.S. Stem Cell Clinic of Sunrise, Florida. At that moment she took away access to the stem cells of hundreds if not thousands of patients. Including my wife. The Judge also took away our hope in our fight against this horrific disease.

On June 25, 2019, Judge Ungaro issued an Order and Injunction that generally prohibits U.S. Stem Cell, Inc., U.S. Stem Cell Clinic, LLC and others from receiving, processing, and distributing SVF Product, among other actions. This Order also requires that *"within thirty (30) calendar days after the entry of this Order, Defendants, under FDA's supervision, shall **destroy** any and all SVF Product that is in Defendants' possession, custody, or control."* Unless this injunction is modified, U.S. Stem Cell Clinic will be required to destroy every patient's tissue bank samples within 30 days.

I am fighting for my wife's life – literally every day. She is a petite 5' tall, woman but a tremendous fighter. She has been battling her disease for likely more then two years. Average life expectancy of an ALS patient is 3-5 years. They will die from pneumonia, choking, respiratory failure or often a less taxing and personal method of their own choosing.

We immediately sought ALS clinical trials based on the benefits of stem cell treatments. It is paramount to know that Israel is on Phase 4 of its trial, Mayo is at Phase 3 and Phase 2 for SVC. Universities and Clinics across the country from Massachusetts General to Cedars - Sinai are seeing the benefits of stem cell treatments. So, after weeks of calls and investigation last July we went to the U.S. Stem Cell Clinic.

The day after her first injection her speech was back to 90% of it's original clarity – we were ecstatic! As the clinic told us continued results could possibly come from long-term and repeat treatments with no guarantees. After treatments every two months Angie is showing signs of remission. You can hear it in her voice and see her strength and atrophy being maintained. Something as simple as the return of her level smile brings me joy and determination.

Angie is one case. I don't have lobbyists or "Big Pharma" on our side. I only have my words and my wife. With the aid of U.S. Stem Cell her body is healing itself. I implore you to consider the personal facets of this case and the others who are getting results and intercede on behalf of them all to allow the continued stem cell treatment they so desperately need.

Please help stop the recklessness of Judge Ungaro.

Sincerely,

Steven J. Martin
Loving Husband

Cc: The Honorable Judge K. Michael Moore,
The Honorable Judge Ursula Ungaro

June 8,2019

Judge Ungaro,

I am writing in response to your recent court which sided with the FDA in an ongoing case against US Stem Cell Clinic and US Stem Cell, Inc.

This ruling has affected many folks who are desperately trying to find relief, comfort and potential cures from their personal medical issues.

My friend, Angie Martin is being treated for ALS and options for ALS patients are slim to none. Of the two current FDA approved drugs one has little effect and the other is unknown to work and is as devastating to the body as the disease. There are reported 70,000 studies for cancer. There are twelve for ALS, MS and Parkinson's.

Noted ALS clinical trials and research show the benefits of stem cell treatments. Sadly, there are not enough openings for all patients suffering from an ALS diagnosis to participate in an ongoing trial study.

Angie and her husband Steve have tirelessly tried to find treatment that might offer some relief from the disease that has torn apart the beautiful life they enjoyed prior to the diagnosis and search for treatment.

Angie has been on a 6-8 week injection protocol and was seeing some improvements and maintenance of her health. She is disappointed to say the least, because for the foreseeable future she cannot get stem cell injections or even her own cells back from the stem cell bank!

Since the Human Genome Project completion, advances in science and medicine have shown that treatments and protocols can be very individualized and treatment methods will vary greatly between individuals. Patients seeking treatments should not be prohibited from exploring opportunities that might be beneficial to their situation, even if it might not be the solution for others with the same affliction. This is a crucial moment for patients trying to find a positive reaction to a disease that has a very negative prognosis.

My hope is that Angie and the many people affected by this court ruling, will have the opportunity to make their own decision whether to continue their stem cell protocols without legal intervention of the court system.

Thank You,
Salli Kirkland
Sanibel Florida

Honorable Judge Ursula Ungaro
Southern District of Florida
US District Court
301 N Miami Avenue FL11
Miami, FL 33128-7712

June 8, 2019

Dear Judge Ungaro,

My neighbor and dear friend Angie Martin has been a patient of U.S. Stem Cell Clinic for a considerable period of time. Due to their work with her stem cells, Angie has made improvements and been able to maintain good health over the past year.

I respectfully request that you reverse your decision so that Angie can continue her courageous fight against ALS. If this is not possible, at the very least, I request that you lift the restriction prohibiting Angie, and those like her, from having access to her own stem cells which are currently banked in a FDA approved facility.

Without either of these options, you are sentencing Angie to a dramatically shorter and much more painful life, to say nothing of the pain her family and friends will also be forced to endure.

Respectfully,

Bob Nahm

Chief Judge K. Michael Moore
Wilkie D. Ferguson, Jr. United States Courthouse
400 North Miami Avenue, Room 13-1
Miami, FL 33128

The Honorable Judge K. Michael Moore
On June 3, 2019, Judge Ungaro sided with the FDA in an ongoing case against US Stem Cell Clinic and US Stem Cell, Inc. Her decision was a gut punch for our dear friends in Fort Myers — and for every ALS patient in the state of Florida and beyond.

Because of her ruling, for the foreseeable future ALS patients like our friend Angie Martin cannot receive stem cell injections — or even her own cells back from the stem cell bank! On a 6-8 week injection protocol, Angie has seen some improvements and maintenance of her health. I trust you are aware of the devastating effects of this disease. Finally, the stem cell injections were giving our friend some kind of silver lining for relief and improvement!

Can you imagine if YOU or one of YOUR loved ones were sentenced with this disease and had so few treatment options — and then the one thing that provided some hope was taken away from you or your friend or family member?

This is where we are at; Consider how little research is being done to help our Florida neighbors (and patients across the nation) who have ALS: Of the two current FDA approved drugs, one has little effect. The other is unknown to work and is as devastating to the body as the disease. There are reported 70,000 studies for cancer. There are 12 for ALS, MS and Parkinson's.

And, yet, stem cell research is showing promise and giving ALS patients hope. Noted ALS clinical trials show the benefits of stem cell treatments. The Israel-directed "Brainstorm" trial at the Mayo Clinic is one of these studies, but our friend Angie missed the age cut-off by a month. When we asked about the second Mayo study from stromal vascular cells, we were told they had an over abundance of candidates. It is paramount to know that Israel is on Phase 4 of its trial, Mayo is at Phase 3 and Phase 2 for stromal vascular cells. Universities and clinics across the country — from Harvard Medical and the National Institute of Health to Cedars Mount Sinai — are seeing the benefits for stem cell treatments.

Please consider supporting stem cell research using one's own cells. We know pharmaceutical companies worry about their bottom line should our own bodies hold the answer to treating debilitating and fatal diseases. But surely, human life is more important than their annual revenue. Surely it is time for us to join together and evolve beyond our drive for the almighty dollar and instead be brave, bold and innovative as we stand up for Angie's health, our children's health, your own health and the health of your loved ones.

Please thoughtfully consider ruling on the side of human life. Thank you for your time.

Miami, FL 33128

The Honorable Judge K. Michael Moore:

On June 3, 2019, Judge Ungaro sided with the FDA in an ongoing case against US Stem Cell Clinic and US Stem Cell, Inc. Her decision was a gut punch for my friend Angie Martin of Fort Myers — and for every ALS patient in the state of Florida and beyond.

Because of her ruling, for the foreseeable future ALS patients like my friend Angie cannot receive stem cell injections — ***or even her own cells back from the stem cell bank!*** On a 6-8 week injection protocol, Angie has seen some improvements and maintenance of her health. I trust you are aware of the devastating effects of this disease. Finally, the stem cell injections were giving my friend some kind of silver lining for relief and improvement! I suffered through the decline of members of my own family who were taken by this horrible disease and have been astonished by Angies strength and the slow progression of the disease in her body. I have seen with my own eyes the improvement of her health after the injections and the improvement in her speech. Not only are these treatments nourishing her health, but also her hope and fight.

Please put yourself in Angies place for a moment and imagine if YOU or one of YOUR loved ones were sentenced with this disease and had so few treatment options — and then the one thing that provided some hope was taken away from you or your friend or family member? This is where we are at.

There is so little research is being done to help those with ALS:

- Of the two current FDA approved drugs, one has little effect. The other is unknown to work and is as devastating to the body as the disease.
- There are reported 70,000 studies for cancer. There are twelve for ALS, MS and Parkinson's.

And, yet, stem cell research is showing promise and giving ALS patients hope. Noted ALS clinical trials show the benefits of stem cell treatments. The Israel-directed "Brainstorm" trial at the Mayo Clinic is one of these studies, but my friend Angie missed the age cut-off by a month. When we asked about the second Mayo study from stromal vascular cells, we were told they had an over abundance of candidates. It is paramount to know that Israel is on Phase 4 of its trial, Mayo is at Phase 3 and Phase 2 for stromal vascular cells. Universities and clinics across the country — from Harvard Medical and the National Institute of Health to Cedars Mount Sinai — are seeing the benefits for stem cell treatments.

Please consider supporting stem cell research using **one's own cells**. Time is of the essence, this disease does not wait for legal battles to be fought and won. We need you to step up and support us and to rule on the side of human life. Life is precious, please help our loved one affected with this devastating disease have the treatments that can extend them and help them live in comfort and with integrity.

Thank you for your time.

The Honorable Judge K. Michael Moore:

On June 3, 2019, Judge Ungaro sided with the FDA in an ongoing case against US Stem Cell Clinic and US Stem Cell, Inc. Her decision was a gut punch for our dear friends in Fort Myers — and for every ALS patient in the state of Florida and beyond.

Because of her ruling, for the foreseeable future ALS patients like our friend Angie Martin cannot receive stem cell injections — *or even her own cells back from the stem cell bank!* On a 6-8 week injection protocol, Angie has seen some improvements and maintenance of her health. I trust you are aware of the devastating effects of this disease. Finally, the stem cell injections were giving our friend some kind of silver lining for relief and improvement!

Can you imagine if YOU or one of YOUR loved ones were sentenced with this disease and had so few treatment options — and then the one thing that provided some hope was taken away from you or your friend or family member? This is where we are at.

Consider how little research is being done to help our Florida neighbors (and patients across the nation) who have ALS:

- Of the two current FDA approved drugs, one has little effect. The other is unknown to work and is as devastating to the body as the disease.
- There are reported 70,000 studies for cancer. There are twelve for ALS, MS and Parkinson's.

And, yet, stem cell research is showing promise and giving ALS patients hope. Noted ALS clinical trials show the benefits of stem cell treatments. The Israel-directed "Brainstorm" trial at the Mayo Clinic is one of these studies, but our friend Angie missed the age cut-off by a month. When we asked about the second Mayo study from stromal vascular cells, we were told they had an over abundance of candidates. It is paramount to know that Israel is on Phase 4 of its trial, Mayo is at Phase 3 and Phase 2 for stromal vascular cells. Universities and clinics across the country — from Harvard Medical and the National Institute of Health to Cedars Mount Sinai — are seeing the benefits for stem cell treatments.

Please consider supporting stem cell research using one's own cells. We know pharmaceutical companies worry about their bottom line should our own bodies hold the answer to treating debilitating and fatal diseases. But surely, human life is more important than their annual revenue. Surely it is time for us to join together and evolve beyond our drive for the almighty dollar and instead be brave, bold and innovative as we stand up for Angie's health, our children's health, your own health and the health of your loved ones.

Please thoughtfully consider ruling on the side of human life. Thank you for your time.

Governor Ron DeSantis, State Of Florida
The Capital
400 S Monroe Street
Tallahassee, FL 32399-0001

Dear Governor DeSantis:

I need your help, please.

On an unusually cold and snowy day, April 19, 2018 in Rochester, Minnesota the Mayo Clinic handed my wife Angie a death sentence of Amyotrophic Lateral Sclerosis (ALS). We were given no hope of recovery only a list of services to contact and the parting words "good luck." At that moment all happiness was ripped from our lives.

On June 3, 2019 Judge Ursula Ungaro of United States District Court for the Southern District of Florida sided with the FDA in an ongoing case against U.S. Stem Cell Clinic of Sunrise, Florida. At that moment she took away access to the stem cells of hundreds if not thousands of patients. And my wife. The Judge also took away our hope in our fight against this horrific disease.

I have never written to an official of any kind but now I am fighting for my wife's life – literally every day. She is a petite 5' tall, woman but a tremendous fighter. She has been battling her disease for likely more than two years. Average life expectancy of an ALS patient is 3-5 years. They will die from pneumonia, choking, respiratory failure or often a less taxing and personal method of their own choosing. I am humbled by her spirit and live each day by a code that "Love Always Hopes."

We immediately sought ALS clinical trials based on the benefits of stem cell treatments. It is paramount to know that Israel is on Phase 4 of its trial, Mayo is at Phase 3 and Phase 2 for SVC. Universities and Clinics across the country from Harvard Medical to Cedars Mount Sinai are seeing the benefits of stem cell treatments. So, after weeks of calls and investigation last July we went to the U.S. Stem Cell Clinic.

The day after her first injection her speech was back to 90% of it's original clarity – we were ecstatic! As the clinic told us continued results could possibly come from long-term and repeat treatments with no guarantees. After treatments every two months Angie is showing signs of remission. You can hear it in her voice and see her strength and atrophy being maintained. Something as simple as the return of her level smile brings me joy and determination.

Angie is one case. I don't have lobbyists or "Big Pharma" on our side. I only have my words and my wife. With the aid of U.S. Stem Cell her body is healing itself. I implore you to consider the personal facets of this case and the others who are getting results and intercede on behalf of them all to allow the continued stem cell treatment they so desperately need.

Thank you.

Sincerely,

Steven J. Martin
Loving Husband
