**Action Filed:** August 27, 2020  
**Trial Date:** None Set

- 1       1. I submit this declaration in support of Plaintiffs' Motion for a preliminary injunction.
- 2       2. I am a medical doctor and I have been involved in medical research and the evaluation of
- 3           medical research for 45 years (even before I became a doctor). I have personal
- 4           knowledge of the information set forth herein, and if called to testify, I could competently
- 5           testify as follows:
- 6       3. In 1993, I co-founded the Cochrane Collaboration which is a collaborative effort by
- 7           patients, scientists and researchers around the world to evaluate medical research to assist
- 8           patients, health professionals and policy makers to make better decisions. During the
- 9           twenty-five years I worked with the Cochrane Collaboration, the group has published
- 10           about 10,000 systematic reviews or protocols for upcoming reviews on the benefits and
- 11           harms of interventions used in healthcare.
- 12       4. In 2018, I founded the Institute for Scientific Freedom where I continue with the same
- 13           kind of work, I performed at the Cochrane Collaboration. (A copy of my CV with a list of
- 14           books, book chapters and publications are attached as Exhibit "A.")
- 15       5. I am the author of seven books since 2007, the first of which is Rational Diagnosis and
- 16           Treatment: Evidence-based Clinical Decision-making (4th ed.).
- 17       6. One of my most recent books, published earlier this year, and the one which is most
- 18           relevant to the issues in this case is titled "Vaccines: Truths, Lies and Controversy." The
- 19           book was published by People's Press in Denmark; will be published by Skyhorse in
- 20           New York later this year; and will appear in many languages. The book has a chapter on
- 21           the flu vaccines, and specifically reviews the evidence of its benefits and harms. In this
- 22           declaration, I will present some of the conclusions I reached in the chapter drawing in
- 23           the
- 24           declaration, I will present some of the conclusions I reached in the chapter drawing in
- 25           the

1 particular on the results from the three reviews the Cochrane Collaboration published on  
2 the flu vaccine to healthy adults in 2010, 2014 and 2018.

3 **The Efficacy and Public Benefit of the Flu Vaccine is so questionable that it Should  
4 not be Given Routinely to Healthy Adults**

- 5 7. My general conclusion is that the recommendation in some countries that healthy adults  
6 should take the seasonal flu vaccine is not supported by the medical literature, despite  
7 American government agencies', e.g. CDC's, enthusiastic support for giving this vaccine  
8 to healthy people. The 2010 Cochrane review, "Vaccines for preventing influenza in  
9 healthy adults," was based on randomized clinical trials and comparative studies  
10 assessing serious and rare harms.<sup>1</sup> It concluded: "The results of this review seem to  
11 discourage the utilization of vaccination against influenza in healthy adults as a routine  
12 public health measure." The researchers furthermore noted that, "We found no evidence  
13 that vaccines prevent viral transmission or complications" and that: "Inactivated vaccines  
14 caused local harms and an estimated 1.6 additional cases of Guillain-Barré Syndrome per  
15 million vaccinations. The harms evidence base is limited."
- 16 8. Four years later, the Cochrane review was updated with 41 new trials.<sup>2</sup> This massive  
17 addition of new data had no material influence on the results of the review and the  
18 researchers' conclusion was similar to that in their 2010 review: "The results of this  
19 review provide no evidence for the utilization of vaccination against influenza in healthy  
20 adults as a routine public health measure."

28 10.1002/14651858.CD001269.pub5.

- 1           9. In 2018, the Cochrane review was updated again and the review now included 52  
2           randomized clinical trials and over 80,000 people:<sup>3</sup> “Inactivated influenza vaccines  
3           probably reduce influenza in healthy adults from 2.3% without vaccination to 0.9% (risk  
4           ratio (RR) 0.41, 95% confidence interval (CI) 0.36 to 0.47; 71,221 participants;  
5           moderate-certainty evidence).” This could be considered a worthwhile effect at the  
6           population level but hardly at the individual level, as “71 healthy adults need to be  
7           vaccinated to prevent one of them experiencing influenza.”  
8
- 9           10. It can be debated, however, whether flu shots for healthy adults are worthwhile  
10          interventions at the population level. It was quite disappointing that vaccination did not  
11          decrease admissions to hospital (risk ratio 0.96; 95% CI 0.85 to 1.08) or days off work  
12          (difference -0.04 days; 95% CI -0.14 to 0.06).
- 13          11. The Executive Order mandating the flu vaccine is based on a belief that it will reduce  
14          hospital bed usage. That belief is simply wrong, which the Cochrane review showed.  
15
- 16          12. The Executive Order from Janet A. Napolitano is a three-page document where she  
17          quotes the literature selectively to such an extent that I consider it scientific misconduct.  
18          According to the US Office of Research Integrity, research misconduct includes  
19          “changing or omitting data or results such that the research is not accurately represented  
20          in the research record.”<sup>4</sup> This is exactly what Napolitano did in her document. Cochrane  
21          reviews are widely respected for their high standards but instead of quoting the relevant  
22          Cochrane review of the randomized trials, she quoted a number of deeply flawed case-

control studies, even though case-control studies are known to be notoriously unreliable for assessing the benefits of interventions in healthcare. I have criticized some of the worst of these studies in my vaccine book, including two of the studies mentioned by Napolitano, and shown why the benefit they claim for flu shots are simply impossible, given other evidence. For one of the two studies,<sup>5</sup> I wrote in my book that the CDC claimed that, “In recent years, flu vaccines have reduced the risk of flu-associated hospitalizations among adults on average by about 40%. How is this possible when the randomized trials didn’t find anything? Oh well, it was a systematic review of case-control studies. Forget it.” For the other study that Napolitano quotes,<sup>6</sup> I wrote: “A 2018 study showed that from 2012 to 2015, flu vaccination among adults reduced the risk of being admitted to an intensive care unit (ICU) with flu by 82 percent. Interesting game. We are approaching 100% vaccine efficacy but are witnessing a scientific playroom, totally detached from reality.”

## **There is Convincing Evidence that Flu Shots Can Cause Harm**

13. Systematic reviews have noted serious deficiencies in the reporting of harms in published influenza vaccine trials. But it is a fact that flu shots can cause serious harm. I mention in my vaccine book that it has been firmly established that the influenza vaccine Pandemrix can cause narcolepsy, a life-long, seriously debilitating condition with poor treatment

options where people suddenly fall asleep, with an onset from about two months after vaccination and up to at least two years later. The likely mechanism is an autoimmune cross-reaction in people with a particular tissue type between the active component of the vaccine and receptors on brain cells controlling the day rhythm. More than 1300 people developed narcolepsy. I also mention that, in 2009, Australia suspended its universal vaccination influenza program for children younger than five years because of a surge in febrile convulsions following vaccination (1 in 110 children). Official inquiries confirmed the vaccine's role, also in this case. These harms came to light because their incidence was ten times the background rate. Influenza vaccines are biologics, and biologic manufacturing is messy, with risks of contamination far in excess of that seen in ordinary drug production.

- 13      14. I agree with the statement in the Complaint that the package insert of a popular flu
- 14      15. I also agree with the concerns in the complaint about possible harmful virus interferences
- 15      16. The most reliable studies and reviews we have suggest that administering the flu vaccine

- 17      18. coronovirus but even the influenza virus itself. Studies by Canadian researchers indicated
- 18      19. that people who received a seasonal influenza vaccine in 2008 had an increased risk of
- 19      20. getting infected with another influenza strain in 2009.<sup>7</sup> They replicated their findings in
- 20      21. five different studies and I find their methods and results convincing.

<sup>7</sup> Skowronski DM, De Serres G, Crowcroft NS, et al. Association between the 2008–09 seasonal influenza vaccine and pandemic H1N1 illness during spring–summer 2009: four observational studies from Canada. PLoS Med 2010;7:e1000258.

1 harm and will likely cause more harm than good. This is particularly because mandatory  
2 flu shots are highly likely to increase vaccine hesitancy in general, including refusing  
3 life-saving vaccines to people's children like the MMR vaccine. I therefore consider it  
4 likely that mandatory vaccination of 510,000 members of the University of California  
5 community will increase deaths from infections because public distrust in the authorities  
6 will be nourished by this ill-thought through and totally inappropriate use of force.  
7

8 17. No one has any idea about what the results would be of increased vaccine coverage for  
9 influenza on the risk of getting infected with coronavirus and dying from it, but I am not  
10 optimistic that the results would be beneficial. For example, it has been thoroughly  
11 documented in many carefully conducted studies that vaccination with non-live viruses  
12 increases mortality from other infections (see my book; particularly Peter Aaby has made  
13 groundbreaking research in this area).

14 18. My overall conclusion about Napolitano's forced vaccination scheme is that it is deeply  
15 unethical, violates basic human rights, and is based on no reliable evidence whatsoever.  
16 In fact, the best evidence we have tells us that her forced vaccination scheme is highly  
17 likely to be harmful.

19 19. I have a balanced view on vaccines, based on reliable science. This is the reason why my  
20 new vaccine book, first published in February 2020, has already appeared in Danish,  
21 Swedish and Dutch, three very small language areas, and will also appear in major  
22 languages like Spanish, French and German. My evidence-based approach to vaccines is  
23 apparent on the first page in my vaccine book: "Some vaccinations are so beneficial that  
24 we should all get them while others should not be used except for special circumstances.  
25 Some are so controversial that many healthcare professionals do not use them for  
26

1                   themselves even though they are officially recommended, e.g. the influenza vaccines. We  
2                   must evaluate carefully each vaccine, one by one, assessing the balance between its  
3                   benefits and harms, just as we do for other drugs, and then form an opinion about whether  
4                   we think the vaccine is worth getting or recommending to other people.”

5                   20. I declare under penalty of perjury under the laws of the State of California that the  
6                   foregoing is true and correct and that this declaration was executed on September 9, 2020  
7                   in Denmark.
